

TECHNICAL BENCH LOOKBOOK

A Visual Record of Fine Metal Fabrication, Repairs, and Stone Setting

This technical project lookbook is a curated physical catalog designed for workshop managers, master goldsmiths, and jewellery manufacturers. It serves as verified evidence of practical competence across **precious metal fabrication, precision stone setting, complex thermal-shielded ring resizing, and luxury watch maintenance**. Each project listed corresponds to Taryn Nicola Wilson's professional bench portfolio and details the specific materials and senior-level techniques employed.

SECTION 1: FINE FABRICATION & COMMISSIONS

9ct Yellow Gold Sapphire & Diamond Halo Cuff

MATERIALS: 9ct Yellow Gold, Natural Cushion Blue Sapphires, Round Brilliant Diamonds

Fabrication of a solid 9ct gold cuff featuring natural cushion-cut blue sapphires bezel-set within precision micro-pavé diamond halos. Highlights technical mastery of heavy metal forming, tube-drawing, precise bezel positioning, micro-setting, and high-lustre polishing.

9ct Yellow Gold Open-Heart Pendant

MATERIALS: 9ct Yellow Gold, Sterling Silver Gold-Plated Trace Chain

Commissioned signature piece fabricated in solid 9ct yellow gold, hand-crafted as the grand prize for the *Mervis Bros Jewellers Valentine's Day Campaign* (valued at R4,900). Highlights expert internal curve hand-sawing, micro-filing, and flawless mirror finishing.

Sterling Silver Interlocking Russian Wedding Band

MATERIALS: Sterling Silver (925)

Classic rolling ring featuring three interlocking bands constructed from hand-drawn sterling silver wire. Demonstrates advanced mathematics and structural geometry to ensure all bands sit flush and slide smoothly on the finger without binding.

SECTION 2: REPAIR, RESTORATION & WATCH SERVICING

Advanced Aquamarine Resizing with Thermal Shielding

MATERIALS: Yellow Gold, Natural Emerald-Cut Aquamarine, Brilliant Diamonds

Advanced resizing of a gold multi-stone ring. The central, heat-sensitive emerald-cut Aquamarine gem and surrounding diamond-pave set halos are fully encased in a green heat-sink protective clay compound to shield them from the torch while the bottom shank seam is soldered.

Solitaire Ring Sizing Up & Piece Insertion Sequence

MATERIALS: Yellow Gold Ring, Solitaire Diamond

Sizing up a band by cutting, spreading the shank, measuring and hand-fabricating a matching gold sizing insert, placing the wedge, double-seam soldering, filing, and finishing. Demonstrates clean ring enlargement with completely invisible seam flow.

Gold Engagement Ring Shank Rebuild & Restoration

MATERIALS: Yellow Gold Ring with Solitaire White Diamond

Repair of a severe stress fracture on an engagement ring shank. Includes reshaping the split ends, joint preparation, precision reflowing of gold solder to restore structural integrity, and professional hand-polishing to remove all traces of repair.

Severed Shank Restoration on Silver Pavé Ring

MATERIALS: Sterling Silver, Decorative Pavé Setting Mounts

Structural repair on a highly detailed, pavé-set sterling silver ring. Demonstrates precise micro-flame control to flow solder on a delicate mount without overheating adjacent accent stones or distorting the highly decorative setting gallery.
